- Installed hashicorp/aws v6.64.0 (signed by HashiCorp)
```

Terraform has created a lock file `.terraform.lock.hcl` to record the provider selections it made above. Include this file in your version control repository so that Terraform can guarantee to make the same selections by default when you run "terraform init" in the future.

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see any changes that are required for your infrastructure. All Terraform commands should now work.

If you ever set or change modules or backend configuration for Terraform, rerun this command to reinitialize your working directory. If you forget, other commands will detect it and remind you to do so if necessary.

```
HP@DESKTOP-NARSTND MINGW64 ~/Brain-Tasks-App/Trend (main)
$ terraform plan
```

Terraform used the selected providers to generate the following execution plan. Resource actions are indicated with the following symbols:
+ create

Terraform will perform the following actions:

```
# aws_iam_instance_profile.jenkins_profile will be created
+ resource "aws_iam_instance_profile" "jenkins_profile" {
  + arn           = (known after apply)
  + create_date  = (known after apply)
  + id           = (known after apply)
  + name         = "jenkins-profile"
  + name_prefix  = (known after apply)
  + path         = "/"
  + role         = "jenkins-admin-role"
  + tags_all     = (known after apply)
  + unique_id    = (known after apply)
}

# aws_iam_role.jenkins_role will be created
+ resource "aws_iam_role" "jenkins_role" {
  + arn              = (known after apply)
  + assume_role_policy = jsonencode(
    {
      + Statement = [
        + {
          + Action      = "sts:AssumeRole"
          + Effect      = "Allow"
          + Principal = {
            + Service = "://amazonaws.com"
          }
        },
      ],
    }
  )
  + Version = "2012-10-17"
}
```

```
PS C:\Users\HP\Brain-Tasks-App\Trend>
```

```
PS C:\Users\HP\Brain-Tasks-App\Trend> terraform validate
```

Success! The configuration is valid.

Plan: 1 to add, 0 to change, 0 to destroy.

Changes to Outputs:

```
+ jenkins_public_ip = (known after apply)
aws_instance.jenkins_server: Creating...
aws_instance.jenkins_server: Still creating... [00m10s elapsed]
aws_instance.jenkins_server: Creation complete after 17s [id=i-0aac2f075a4094ff9]
```

Apply complete! Resources: 1 added, 0 changed, 0 destroyed.

Outputs:

```
jenkins_public_ip = "44.192.109.153"
PS C:\Users\HP\Brain-Tasks-App\Trend>
```
